Errors	Amount
Invalid robots.txt format **About this issue:** If your robots.txt file is poorly configured, it can cause you a lot of problems. Webpages that you want to be promoted in search results may not be indexed by search engines, while some of your private content may be exposed to users. So, one configuration mistake can damage your search rankings, ruining all your search engine optimization efforts. **How to fix:** Review your robots.txt file and fix all errors, if there are any. You can check your file using Google's robots.txt Tester For information on how to configure your robots.txt, please see this article	1 0
0 pages returned 5XX status code	0 0
0 pages returned 4XX status code	0 0
0 pages don't have title tags	0 0
0 issues with duplicate title tags	0 0

1 page doesn't have an h1 heading **About this issue:** While less important than <title> tags, h1 headings still help define your page's topic for search engines and users. If an <h1> tag is empty or missing, search engines may place your page lower than they would otherwise. Besides, a lack of an <h1> tag breaks your page's heading hierarchy, which is not SEO friendly. **How to fix:** Provide a concise, relevant h1 heading for each of your page.	1 0
1 page has low text-HTML ratio **About this issue:** Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster. **How to fix:** Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.	1 0
1 page has a low word count **About this issue:** This issue is triggered if the number of words on your webpage is less than 200. The amount of text placed on your webpage is a quality signal to search engines. Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts. For more information, please view this video **How to fix:** Improve your on-page content and be sure to include more than 200 meaningful words.	1 0

Warnings	Amount
Sitemap.xml not indicated in robots.txt **About this issue:** If you have both a sitemap.xml and a robots.txt file on your website, it is a good practice to place a link to your sitemap.xml in your robots.txt, which will allow search engines to better understand what content they should crawl. **How to fix:** Specify the location of your sitemap.xml in your robots.txt. To check if Googlebot can index your sitemap.xml file, use the Sitemaps report in Google Search Console	1 0
0 external links are broken	0 0
0 external images are broken	0 0
0 links on HTTPS pages lead to HTTP page	0 0
0 pages don't have enough text within the title tags	0 0
